Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In the description of a wall element in claim 10, the phrase "in the form of a profile" is not considered to be proper idiomatic English, is not understood, and thus is not distinctly claimed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Stone, US Patent 5,403,679.

Stone discloses a box holding a plurality of batteries. (See Figure 1.) The box is a modular battery stack with a plurality of battery trays. As shown in Fig. 3, the side walls consist of an assembly of stacked modules (40), each having a pair of wall elements (38). With regards to claim 10, each wall element has a folded edge. which

Art Unit: 1745

combined with the bottom piece of the module above, form a support for a row of batteries. With regards to claim 11, the battery includes retention means, (46) and (34). With regards to claim 12, posts (70) are removable rods, extending through the folded edges of the battery box.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stone, US Patent 5,403,679.

With regards to claims 13-15, Stone discloses applicants' invention essentially as claimed, with the exception that Stone shows only one end wall (16) with the fixing lugs, (92), ventilation, and spaced openings for use with a forklift truck (86) as claimed. Note that elements 92 are described by Stone as "key latches", but are broadly considered to be "lugs". The use of a second end wall would have been obvious to one of ordinary skill in the art because Stone describes a purpose of the first end wall being "to provide an aesthetically desirable appearance". (Column 6, lines 32-37.) Thus, in order to provide an aesthetically desirable appearance having symmetry, one of ordinary

Art Unit: 1745

skill in the art would provide a second end wall symmetrically arranged, and thus at the opposite end wall, to the one described by Stone.

With regards to claim 16, Stone describes applicants' invention essentially as claimed, with the exception that Stone does not describe a plurality of battery boxes. A plurality of battery boxes as disclosed by Stone would have been obvious to one of ordinary skill in the art because the duplication of parts (for a multiplied effect) has been shown to be obvious unless a synergistic effect can be shown. See *St. Regis Paper Co. v. Bemis Co., Inc.*, 193 USPQ 8, 11, (7th Cir.) 1977)

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Iwamura, US Patent 6,400,122 discloses a "battery box".
